Gambaran Pengetahuan Dan Sikap WUS Tentang Penerapan Protokol Kesehatan Pencegahan Covid-19 Di Wilayah Kerja Puskesmas Payung Sekaki Tahun 2020.

Xiv, 42 Halaman, 10 Tabel, 10 Lampiran, 1 Skema, 0 Gambar.

ABSTRAK

Latar Belakang: Kasus aktif corona didominasi oleh pasien dengan usia produktif yaitu 19-45 tahun. Maka dari itu penting menjaga stamina tubuh, tidak lengah saat menjalankan kegiatan luar rumah, dan selalu menjaga anggota keluarga, terutama resiko rentan agar tidak tertular. Alasan: dikarenakan angka kasus positif di Indonesia berada pada kondisi mengkhawatirkan terutama di Riau. Coronavirus atau virus corona merupakan keluarga besar virus yang menyebabkan infeksi saluran pernafasan atas ringan hingga sedang, seperti penyakit flu. Banyak orang terinfeksi virus ini, setidaknya satu kali dalam hidupnya. Tujuan dari penelitian ini adalah untuk mengetahui pengetahuan dan sikap wus tentang penerapan protokol kesehatan pencegahan covid-19. Penelitian ini bersifat kuantitatif. Penelitian ini dilakukan di wilayah kerja puskesmas payung sekaki dengan jumlah responden 100 orang. Desain penelitian yang digunakan adalah deskriptif korelasi dengan menggunakan alat instrument penelitian kuesioner tertutup. Hasil penelitian pada kuesioner pengetahuan paling tinggi di kategori cukup sebanyak 42 orang (42%), sedangkan sikap paling tinggi di positif sebanyak 91 orang (91%). Simpulan penelitian ini adalah pengetahuan dan sikap wus tentang penerapan protokol kesehatan pencegahan covid-19 di wilayah kerja puskesmas payung sekaki tergolong baik. Saran: diharapkan kepada seluruh masyarakat terutama wus agar tetap menjaga kesehatan serta menjalankan protokol kesehatan sesuai dengan aturan pemerintah.

Description of WUS Knowledge and Attitude Regarding the Implementation of the Covid-19 Prevention Health Protocol in the Work Area of the Payung Sekaki Health Center in 2020.

Xiv, 42 Pages, 7 table, 10 attachment, 1 scheme, 0 picture

ABSTRACT

Background: Active cases of corona are dominated by patients of productive age, namely 19-45 years. Therefore, it is important to maintain body stamina, not be careless when carrying out activities outside the home, and always take care of family members, especially the vulnerable risk so as not to get infected. Reason: because the number of positive cases in Indonesia is in an alarming condition, especially in Riau. Coronaviruses are a large family of viruses that cause mild to moderate upper respiratory tract infections, such as the flu. Many people are infected with this virus, at least once in their life. The purpose of this study was to determine the knowledge and attitude of wus regarding the application of the covid-19 prevention health protocol. This research is quantitative. This research was conducted in the working area of the Umbrella Health Center with 100 respondents. The research design used is descriptive correlation using a closed questionnaire research instrument. The results of the study on the knowledge questionnaire were the highest in the sufficient category as many as 42 people (42%), while the highest attitude was in the positive category as many as 91 people (91%). The conclusion of this study is that the knowledge and attitude of wus regarding the application of the Covid-19 prevention health protocol in the working area of the Umbrella Sekaki Public Health Center is classified as good. Suggestion: it is hoped that the whole community, especially wus, should maintain their health and carry out health protocols in accordance with government regulations.
