Hubungan Peran Orang Tua Dan Perilaku Seksual Di Kelurahan Muara Fajar Timur

Xiv + 57 Halaman + 17 Tabel + 12 Lampiran

ABSTRAK

Berdasarkan hasil studi pendahuluan data laporan Kantor Kelurahan Muara Fajar Timur tercatat pada tahun Oktober 2020-Desember 2021, 23 orang dari remaja perempuan hamil diusia remaja sudah menikah dan 10 orang remaja mengalami kehamilan diluar nikah. Tujuan dalam penelitian ini adalah untuk mengetahui apakah ada hubungan peran orang tua dan perilaku seksual dengan kejadian kehamilan usia remaja di Kelurahan Muara Fajar Timur. Desain penelitian ini menggunakan kuantitatif dengan rancangan korelasi menggunakan pendekatan *cross sectional*. Sampel pada penelitian ini berjumlah 91 responden. Teknik pengambilan sampel menggunakan teknik random *sampling* dengan metode *randomisasi*. Hasil analisis univariat didapatkan paling banyak berusia 16-19 tahun, pendidikan SMP, sebagian besar tidak merokok, tidak mengkonsumsi alkohol, lebih dari separuh tidak menggunakan kontrasepsi, belum menikah dan paling banyak usia pertama hubungan seksual usia 15 tahun. Sebagian besar peran orang tua berperan, perilaku seksual berisiko dan mengalami kehamilan di usia remaja. Hasil analisis bivariat *uji chi-square* diperoleh nilai $p\text{ value} = 0,008$ nilai $p\text{ value} = 0,013 (< 0,05)$. Hasil tersebut maka disimpulkan ada hubungan yang signifikan antara peran orang tua dan perilaku seksual dengan kehamilan usia remaja.

Kata Kunci : Perilaku Seksual, Peran Orang Tua dan Kehamilan Remaja

The Relationship between the Role of Parents and Sexual Behavior in Muara Fajar Timur Village

Xiv + 57 Pages + 17 Tables + 12 Attachments

ABSTRACT

Based on the results of a preliminary study of data from the Muara Fajar Timur Sub-District Office, it was recorded that in October 2020-December 2021, 23 of the pregnant teenage girls were married and 10 teenagers had pregnancies outside of marriage. The purpose of this study was to determine whether there is a relationship between the role of parents and sexual behavior with the incidence of teenage pregnancy in Muara Fajar Timur Village. The design of this study was quantitative with a correlation design using a cross sectional approach. The sample in this study amounted to 91 respondents. The sampling technique used random sampling technique with the randomization method. The results of the univariate analysis showed that most of them were aged 16-19 years, had junior high school education, most did not smoke, did not consume alcohol, more than half did not use contraception, were not married and most of them were at the age of first sexual intercourse aged 15 years. Most of the roles of parents play a role in risky sexual behavior and experiencing pregnancy in their teens. The results of the bivariate analysis of the chi-square test obtained p value = 0.008 p value = 0.013 (< 0.05). From these results, it is concluded that there is a significant relationship between the role of parents and sexual behavior with teenage pregnancy.
