Pengaruh Pelatihan *Skill Training* Terhadap Dokumentasi Keperawatan Keluarga Di Wilayah Kerja Puskesmas Lima Puluh dan Payung Sekaki Pekanbaru

xii + 86 Halaman + 1 Skema + 6 Tabel + 10 Lampiran

ABSTRAK

Pelatihan merupakan pendidikan yang menyangkut proses belajar untuk memperoleh dan meningkatkan keterampilan yang berlaku dalam waktu yang relative singkat. Tujuan penelitian untuk mengetahui pengaruh pelatihan *skill training* terhadap dokumentasi keperawatan keluarga di wilayah kerja puskesmas lima puluh dan payung sekaki pekanbaru. Desain penelitian dengan rancangan eksperimen dengan pendekatan metode quasi experimental design dengan rancangan nonequivalent control group design, artinya dalam peneltian ini terdapat kelompok intervensi dan kelompok kontrol. Penelitian dilakukan pada bulan Juli, dengan sampel 7 responden kelompok intervensi 7 sampel kelompok kontrol, dengan teknik *purposive sampling*. Alat pengumpulan data menggunakan kuesioner Oleh Kemenkes RI. Hasil analisis didapatkan hasil nilai rata-rata skor *post-test* kelompok intervensi adalah 29,7143 dengan standar deviasi 4,8795 sedangkan untuk rata-rata skor *post-test* kelompok kontrol adalah 29,4286 dengan standar deviasi 5,3452 dan hasil *p value* skor akhir kelompok intervensi dan kelompok kontrol setelah dilakukan uji analisis Independent T-test didapatkan hasil 0,000 (*p value* < dari 0,05) dan uji analisis Dependent T-test diaptkan hasil 0,000 (*p value* < dari 0,05), maka dapat disimpulkan bahwa terdapat perbedaan yang signifikan skor akhir antara kelompok intervensi dan kelompok kontrol. Disarankan bagi peneliti selanjutnya untuk meneli pelatihan yang berbeda dengan uji yang berbeda.

Kata Kunci : Pelatihan *Skill Training*, Dokumentasi Keperawatan Keluarga

*The Effect of Skill Training on Family Nursing Documentation in the Working Area of
Lima Puluh and Payung Sekaki Public Health Center Pekanbaru*

xiii + 86 Halaman + 1 Skema + 6 Tabel + 10 Lampiran

ABSTRACT

Training is education that involves the learning process to acquire and improve applicable skills in a relatively short time. The purpose of the study was to determine the effect of skill training training on family nursing documentation in the work area of the fifty and umbrella health centers of Pekanbaru, Pekanbaru. The research design was an experimental design with a quasi-experimental design approach with a nonequivalent control group design, meaning that in this study there were an intervention group and a control group. The study was conducted in July, with a sample of 7 respondents from the intervention group, 7 samples from the control group, using purposive sampling technique. The data collection tool uses a questionnaire by the Ministry of Health of the Republic of Indonesia. The results of the analysis showed that the average post-test score for the intervention group was 29.7143 with a standard deviation of 4.8795 while the average post-test score for the control group was 29.4286 with a standard deviation of 5.3452 and the results of the p-value score At the end of the intervention group and the control group, after the Independent T-test analysis test was carried out, the results were 0.000 (p value < from 0.05) and the Dependent T-test analysis test obtained 0.000 results (p value < from 0.05), it can be concluded that there was a significant difference in the final score between the intervention group and the control group. It is recommended for further researchers to examine different training with different tests.

Key words : Skill Training, Family Nursing Documentation
