ABSTRAK

Antenatal Care (ANC) adalah suatu program yang terencana berupa observasi, edukasi dan penanganan medis pada ibu hamil, untuk memperoleh suatu proses kehamilan dan persiapan persalinan yang aman dan memuaskan. Virus Corona merupakan virus yang menyebabkan infeksi saluran pernafasan atas ringan hingga sedang, seperti penyakit flu. Banyak orang terinfeksi virus ini. Dalam situasi pandemi Covid-19 ini, banyak pembatasan hampir ke semua layanan rutin termasuk pelayanan kesehatan ibu dan bayi baru lahir. Sehingga ibu hamil menjadi enggan ke puskesmas atau fasilitas pelayanan kesehatan lainnya karena takut tertular, adanya anjuran menunda pemeriksaan kehamilan dan kelas ibu hamil, serta adanya ketidaksiapan layanan dari segi tenaga dan sarana prasarana termasuk Alat Pelindung Diri. Hal ini menyebabkan pelayanan kesehatan ibu dan bayi baru lahir menjadi salah satu layanan yang terkena dampak, baik secara akses maupun kualitas. Tujuan dari penelitian ini adalah untuk mengetahui Pengetahuan Dan Sikap Sikap Ibu Hamil dalam Kunjungan ANC Selama Masa Pandemi Covid-19. Jenis penelitian ini menggunakan kuantitatif dengan desain deskriptif. Penelitian ini dilakukan di PMB Islah Wahyuni, SSiT. M.Biomed dengan jumlah responden 20 orang. Waktu penelitian dilakukan pada Desember 2020 – September 2021. Teknik pengambilan sampel dalam penelitian ini adalah dengan menggunakan cara *accidental sampling*. Alat instrument penelitian yang digunakan adalah kuesioner tertutup. Hasil penelitian pada kuesioner pengetahuan paling tinggi di kategori kurang sebanyak 9 orang (45%), sedangkan sikap paling tinggi di positif sebanyak 20 orang (100%). PMB dapat menjadikan hasil penelitian ini untuk pertimbangan dalam mengembangkan penyuluhan seperti diskusi, Tanya jawab dan promosi kesehatan tentang ANC dan Covid-19

Kata kunci : pengetahuan, sikap, Perawatan Antenatal, Covid-19.

Description of Knowledge and Attitudes of Pregnant Women in ANC Visits During the Covid-19 Pandemic Period at PMB Islah Wahyuni, SSiT.M.Biomed in 2021

viii + Pages + Tables + Attachments

ABSTRACT

Antenatal Care (ANC) is a planned program in the form of observation, education and medical treatment for pregnant women, to obtain a safe and satisfying pregnancy and delivery process. Corona virus is a virus that causes mild to moderate upper respiratory tract infections, such as flu. Many people are infected with this virus. In this Covid-19 pandemic situation, there are many restrictions on almost all routine services including maternal and newborn health services. So that pregnant women are reluctant to go to the puskesmas or other health care facilities for fear of being infected, there are recommendations to postpone pregnancy checks and classes for pregnant women, as well as the unpreparedness of services in terms of personnel and infrastructure including Personal Protective Equipment. This causes maternal and newborn health services to be one of the services affected, both in terms of access and quality. The purpose of this study was to determine the knowledge and attitudes of pregnant women during ANC visits during the Covid-19 pandemic. This type of research uses quantitative with descriptive design. This research was conducted at PMB Islah Wahyuni, SSiT. M.Biomed with 20 respondents. The time of the study was carried out in December 2020 - September 2021. The sampling technique in this study was using the accidental sampling method. The research instrument used was a closed questionnaire. The results of the research on the knowledge questionnaire were the highest in the poor category as many as 9 people (45%), while the highest attitude was in the positive as many as 20 people (100%). PMB can use the results of this research for consideration in developing counseling such as discussions, questions and answers and health promotion about ANC and Covid-19

Keywords : Knowledge, attitude, Antenatal Care, covid-19.
